

Internet Explorer 8: Enabling the Compatibility View

Compatibility View allows content designed for previous versions of IE browsers to function properly within Internet Explorer 8. If users are unable to view all content within the onCampus or myCourses systems, enabling the **Compatibility View** feature may resolve viewing issues.

To enable **Compatibility View** for onCampus (onCampus.msstate.edu) or myCourses (mycourses.msstate.edu) point your IE8 browser to one of these sites and click the broken page icon in the address bar. When the compatibility check is complete, it remains enabled for all sites within the **msstate.edu** domain.
