Adaptive Release: Adding a Basic Rule

Adaptive release rules allow the instructor to determine what content is available to which students, and under what conditions the students are allowed to view an item. A basic adaptive release rule will allow instructors to add or edit one rule with multiple criteria for a single content item.

1. To add a basic adaptive release rule, access the Content Area to which you wish to set an adaptive release.

2. Click on the chevron button next to the **Content Item** to access the Item Menu. Select **Adaptive Release** from the list of options.

Note: To create multiple rules on an item, select the Advanced Adaptive Release settings

3. Complete the sections on the Adaptive Release page and click **Submit**.

4. Your modified content item will display to you as having an enabled Adaptive Release.
